

ROOTSKIRTS™

Moderates Root Zone Temperatures: Summer and Winter.

- Reduces root zone temperature in summer up to 20 degrees F.
- Reduces root injury when plants blow over.
- Moderates root zone temperatures in winter in many climates.
- Extends root growing period in fall.
- Slows emergence of growth in spring. Reduces likelihood of damage from late spring freezes.
- Can be used on individual containers
- Can be used on above ground pot – in – pot systems for even greater summer and winter temperature moderation.
- In some climates, the use of poly overwintering houses can be eliminated.
- Easy to install.
- Durable. Can be used year after year.
- Attractive.
- Lightweight, easy to ship.
